

We claim:

- 1 1. An enclosed steam cooker comprising:
2 a cookware with lower compartment;
3 having a ceiling and floor where at least a portion of the space is occupied
4 by a liquid and the remaining space is depressurized.

- 1 2. The enclosed steam cooker of claim 1 where the lower compartment is
2 permanently attached to the cookware.

- 1 3. The enclosed steam cooker of claim 1 does not have to be refilled with liquid in
2 the lower compartment of cookware once permanently attached.

- 1 4. The enclosed steam cooker of claim 1 cooks food by steam (produced by liquid
2 in lower compartment) which transmits heat through ceiling of said compartment.
